### What's New in the?

Hard Disk Tune-Up is designed to enhance the performance of your PC hard disks. Problems with file fragmentation are one of the reasons why it takes your system so long to load a file. When file fragmentation is high, system performance can be slow and hard drives can fail. Hard Disk Tune-Up manages and repairs hard disk problems and helps you manage the available space on your hard drive. Hard Disk Tune-Up includes three features: scan, results and optimization. A) Scan: scans your hard drive, measures the number of fragmented records, shows a comparison before and after defragmentation, shows the elapsed time, drives and drives reading/writing and the number of records processed. B) Results: shows the number of fragmented records, shows the total and free space for the selected partition, shows the number of search results, shows the differences of the potential reading time, shows the read time and writes time and the number of files before and after optimization. C) Optimization: after the scan, all the fragmented records are fixed. Files that were not defragmented because the available space was smaller than the size of the file are rearranged and merged. After optimization, the potential reading time is reduced, the free space increases, the number of fragmented records decreases, the MFT size decreases, the drive reading and writing times decrease and the number of items processed increases. .. Features: ♦ Scan hard drives for file fragmentation problems ♦ Compare fragmented records before and after defragmentation ♦ Select hard drives to scan ♦ Show the increase in the free space ♦ Show the total and free space for the selected partition ♦ Show the potential reading time ♦ Show the difference in reading time ♦ Show the reading and writes time ♦ Show the number of files ♦ Show the MFT size ♦ Show the number of fragmented records before and after optimization ♦ Show the file before and after optimization, compare the file size, examine the file attributes ♦ Show the elapsed time ♦ Show the number of records processed ♦ Show the hard drive reading and writing time ♦ Show the number of items ♦ Show the size of the files and MFT ♦ Show the report in a new tab in Internet Explorer and the
