Random Reads Void anything. Small animal blog. Notes To Myself How to find a gynae I can't feel the cervix. Not that I'd know anything about that. Missing Cervix Awareness Day Wednesday 23rd April. "This Awareness Day, the NHS asks you to 'tell someone else about cervix in a private message'. The NHS knows that some people find it difficult to speak to someone else about the private things that happen to you. These days, private things are often discussed in new ways, on the web. But there are times when talking is not always comfortable or straightforward. This Awareness Day is a chance to talk about what it means to you, to people you care

about and to everyone who is interested." I'm going to be really vague and just speak off the cuff. I think it will be good. I've never had a cervix before and I'm not sure what will happen. I'm not certain that the opinions of my peers or family are important to me. I have a learning disability and I'm scared to ask my GP about this. CervixThis invention relates to an active fiber-optic sensor, specifically a chemical sensor for detecting the concentration of a chemical species in a body of liquid. When the refractive index of a material is modified by the presence of another material or other agent (e.g., by adsorption or absorption of the agent, or by the change in the dielectric constant of the material), an optical property of the material is changed. The modulation of the optical property, such as the transmission of light through the material, is generally a function of the strength of the interaction, and is proportional to the concentration of the agent being sensed. Fiber-optic sensors are generally used to monitor the concentration of a chemical species in a body of liquid, either by monitoring the change in
